Safety Statement: Bio-Active Silver HydrosolTM

SOVEREIGN SILVER[®] (10 PPM) CANNOT CAUSE ARGYRIA

It is without hesitation that I support and applaud Natural Immunogenics for making, since 1999, a safe and pure silver product intended for daily consumer use.

I have examined and used Sovereign Silver in its liquid and gel forms, in varying applications in adults, children and pets, and have found it to be extremely effective in enhancing the immune system while also acting as a healing agent.

Every so often, there is increased scrutiny about colloidal silver leading to Argyria, a benign blueish-grey cosmetic condition that is thought to be irreversible. The truth is Argyria can only result from the heavy consumption of poorly made silver products, especially those that are homemade, of high parts-per-million (ppm), and which contain impurities. These impurities form silver compounds that cannot be easily eliminated from the body, and accumulate over time. This is not applicable to Sovereign Silver.

I have reviewed the test results from a photo-toxicity study, performed by an accredited laboratory following standards established and recognized by international regulatory agencies, and confirm that Sovereign Silver cannot cause Argyria.

The Good Manufacturing Practices (GMPs) and laboratory controls followed by the company to ensure finished product quality, purity, safety and efficacy are parallel, if not superior, to those of major pharmaceutical companies.

I am grateful for Natural Immunogenics' high level of ethics and principles, taking no shortcuts to deliver such a critical tool for humanity.
